

HTTP Server

Embedded Web Server

Dear customers,

this is an example for an embedded webserver, completely controlled through the tiger. You can run the programm quickly in just a few simple steps:

- 1) *unzip* the file „HTTP_003_BETA.zip“
- 2) *open* the file „HTTP_Server_Test_V015.tig“
- 3) compile & download this file
- 4) switch your Tiger to **RUN-MODE**
- 5) reset your Tiger
- 6) open a browser like Internet Explorer, Netscape Navigator, Opera or Mozilla
- 7) enter „**http://192.168.1.207**“. This is the IP of the EM-01. If you change the IP by software, you have to enter the new IP in your browser!!!
